# GRAZERS

## EFFECTIVE AGAINST DAMAGE FROM

# SLUGS & SNAILS

With the **NEW G2 formula** we believe we have a unique product that combines and addresses two very crucial and key elements of current horticultural and environmental issues. Using a very safe but effective formula, sprayed directly on to the foliage, not only is the plant being treated against potential damage and its growth stimulated and strengthened, but there is no detrimental impact on the soil, or to the slugs and snails which are a valuable food source for wildlife such as hedgehogs and song thrush. Thus the product has appeal for both the garden lovers who do not want their plants ravaged by slugs, and the environmentalists who abhor chemical damage to the environment and its balance.

We think that it would give those people (many of whom, like us, give thought to both issues ie. the balance of pest damage versus environmental damage) satisfaction and huge peace of mind to be able to think that they are spraying plants with a safe nutritious product that is effective against damage caused by molluscs, whilst leaving them as food for garden wildlife. With this healthy balanced approach, plants and molluscs are both preserved.

**...Live and Let Grow!**

- ✓ Safe to use on edible and ornamental plants
- ✓ Harmless to people, pets and the planet
- ✓ Strengthens and stimulates growth
- ✓ Absorbed into the foliage for longer lasting control
- ✓ Easy ready to use spray, no dilution necessary
